Cloud Competence Center

The central organizational unit for your cloud transition

A Cloud Competence Center (CCC) forms the central organizational unit for all aspects of your cloud transition. In addition to topics such as setting up a technical landing zone, the CCC is responsible for issues related to cloud governance and security. In addition, it also handles specific questions concerning individual cloud initiatives.

The CCC consists of a cross-functional team of external and internal experts. Our goal is always to enable customers to operate a CCC independently of external expertise.

Areas of activity

The most important goal of the CCC is to successfully advance your organization's cloud transition. The tasks are divided into 6 domains (see the figure above right), for which the CCC is fully responsible. However, responsibilities can be delegated to other organizational units.

The CCC works on specific topics, such as:

- Definition of cloud guidelines/principles
- Development of industry and needs-based cloud governance structures
- Implementation of technical and organizational security measures

Your benefits

- Clear responsibilities, accountabilities, and processes for innovation-driven cloud governance
- Support in formulating your cloud strategy
- Fulfillment of common cloud compliance requirements (BSI basic protection, catalog C5; ISO 270xx; BAIT & VAIT; etc.)
- Integration of agile and other proven operational modes
- Change consulting on an organizational and individual level

Work with a cloud expert from the very beginning

Skaylink has more than 10 years of experience in cloud projects. We specialize in highly regulated sectors, such as banking and insurance, operators of critical infrastructure, and public sector customers.

Our expertise extends across all established cloud providers and cloud service offerings, including SaaS integration and governance.

Do you have questions for an AWS expert?
