

Cloud Advisory Workshop

Concentrated knowledge from cloud practice for those in non-technical roles

Our one-day cloud advisory workshop uses practical examples and customer experiences to provide participants with relevant information on the topic of the public cloud and how to integrate it into their own organization. The aim is to intensively convey comprehensive knowledge about key focal points that our experts have collected over the course of numerous AWS cloud projects.

This knowledge helps the participants to broaden their horizon of experience in the cloud area and to be able to answer questions themselves later. The workshop is primarily aimed at those in non-technical roles who need a knowledge overview for their own cloud journey.

Work on cloud, mindset, and compliance in a workshop setting

First, we will develop a common understanding of the relevant cloud terms. We will then develop a common cloud mindset and look at how other companies have made the move to the cloud. During the in-depth sections, we go into more details on such topics as compliance, IT security, and enterprise functionality.

The examples show how the public cloud is also used in very demanding and sometimes highly regulated industries. During the concluding section, participants will receive an overview of common mistakes and stumbling blocks encountered in cloud projects. Finally, the participants can make use of the experiences of other customers and themselves answer previously asked questions.

Your benefits

During our workshop we will combine your business competence with our cloud expertise. You will learn from mistakes and best practices garnered from working with many customer situations from medium-sized and enterprise companies, and you will be able to ask specific questions.

You will be able to develop specific answers together with our experts and the participants from your organization. This creates a common basis for the individual cloud journey at your company, which will allow you to implement new knowledge directly.

Work with an AWS partner from the very beginning

As an experienced AWS expert, Skaylink offers you many advantages as an IT partner:

- First AWS Security Competency Partner in the German-speaking region (Germany, Austria, Switzerland)
- More than 100 certified experts
- More than 20 years of experience in enterprise IT for large and regulated industries
- More than 10 years of experience with cloud projects

Do you have questions for an AWS expert?
I am happy to help: Adrian.Wnek@skaylink.com
