

## Sleep Well

### Secure construction and monitoring of your AWS Landing Zone

The landing zone is the heart of your AWS environment, and in it you operate all AWS accounts and workloads. But do more and more security findings accumulate that are not given enough consideration due to numerous other tasks?

With Sleep Well you can sleep soundly again: Our experts regularly evaluate the security findings and inform you soon if they are critical.

Our many years of experience allow us to work out the findings, prioritize them and then pass them on to the respective teams. We regularly remind you of all issues that are still open and help or enable you to resolve them.

#### Monitoring the landing zone & information on security issues

Our team of experts uses dedicated AWS services to monitor your AWS Landing Zone each workday in accordance with the AWS best security practices. You can count on being informed immediately as soon as critical findings arise.

In Jour Fixes, we communicate with one another on a regular basis. Together we discuss the current findings and, if necessary, help you defuse these through implementable and secure solutions. To do this, we make a concrete evaluation of the identified findings to be able to forward these to the corresponding departments.

#### Your benefits

With Sleep Well you can concentrate on your daily business. We make sure that critical events do not go unnoticed. This reduces the time you used to invest for identifying and evaluating security findings to zero.

The weekly Jour Fixes for discussing current security findings have another positive effect: Customers gradually become more competent with their AWS security competence and learn how issues can be prevented or solved. This is how we can constantly keep the security score of your landing zone at a high level.

#### Work with an AWS partner from the very beginning

- More than 20 years of experience in outsourcing operational responsibilities, insourcing and various SLA responsibilities
- More than 10 years of experience in clouds with a focus on security, compliance and governance
- Ensuring workday checks by a team of experts through automation and manual checks
