

Cloud Journey Acceleration

In the fast lane to cloud business

With our Cloud Journey Acceleration solution, it is possible to quickly and efficiently set up a customized AWS infrastructure in less than a week. We work closely with your internal experts, consider your IT security and architecture requirements, and leverage proven AWS best practices for fast and secure implementation. From the second day on, your AWS infrastructure is included in standardized security monitoring. Our solution gives your organization the time to prepare for organizational changes and empower internal experts, while you begin to reap the benefits of the AWS cloud and position yourself for long-term success.

Our services

The first step is to analyze the customer's current situation in order to develop an individual concept. We involve relevant stakeholders in the design process of the AWS Landing Zone, and our "Sleep Well Team" ensures secure operation from the second day on. In addition, a dedicated AWS expert is available as a single point of contact for technical issues. This support can be provided over several quarters to give the organization time to define, staff, and build its own roles.

Your benefits

Our solution enables you to quickly and securely deploy your new AWS environment. Your IT security department will be involved in the process from the very beginning and will receive turnkey concepts as well as the opportunity to formulate requirements. Your IT department will be ready to deliver and effectively support business units, with the confidence that your activities in the AWS environment are secure and built on best practices. Your departments will have direct access to technical expertise and your organization will get the time it needs to prepare and fill positions.

Why Skaylink?

- Skaylink has been partnering with medium-sized to regulated customers for over twenty years.
- Skaylink is the first AWS Security Competency Partner in the German-speaking region (Germany, Austria, Switzerland) and the first AWS Professional Services Preferred Partner for Infrastructure and Security.
- Combining technology, IT security, and governance issues for rapid implementation speed.
