skaylink

Generative AI (GenAI) hackathon

Demystifying GenAI: a hands-on exploration

We offer a workshop that provides an easy-to-understand, practical overview of what GenAI can do for you. During the hackathon, we'll implement a chatbot based on your company's data, making it more accessible through natural language queries.

In the first part of the hackathon, we'll define the data sources to be included in the chatbot's knowledge base. You'll also learn about all the safety considerations that are important when building a GenAI chatbot.

The second part involves a PoC implementation of the chatbot including fine-tuning and testing.

If you're satisfied with the results, the final step will be implementing the chatbot into your system.

Your benefits

- AI engineers with longstanding experience
- Innovative and agile team
- In-depth view and understanding of GenAI
- Direct answers to your questions from experts
- Deep awareness of the risks and benefits of GenAI, enabling you to make informed decisions on where to apply it in your business
- Faster access to your company data or automated answering of complex customer questions

Skaylink & GenAI

- Comprehensive AI expertise
- Combined knowledge hub for GenAI and cloud technologies
- Experts in the field of natural language processing (NLP)
- Experience with all current large language models (LLMs)
- Experience with the full AWS AI spectrum

Why Skaylink?

- Assisted over 350 companies in migrating to the cloud
- Support for the entire project lifecycle: planning, implementation, operation, support
- Over 10 years of AWS consulting experience

Do you have any questions for an AI expert?
